FREE · WORKS ON WINDOWS

Talk to Rhino from Claude.

Type what you want, like *“make a 22 cm cylinder split into four parts”*, and Claude models it in Rhino for you. It can also look at your viewport and tell you what it sees.

§ 01 What you can do with it

IN PLAIN WORDS

01.1

Model by describing

Ask for shapes, layers, joints or a Grasshopper definition in a sentence. Claude does the clicking.

01.2

Get a second pair of eyes

Claude can take a picture of your viewport, look at it, and point out or fix what looks wrong.

01.3

Help when it won't connect

If Claude can't reach Rhino, it runs a check and tells you, step by step, how to fix it.

§ 02 How it works, in one picture

NOTHING LEAVES YOUR COMPUTER

Claude Code
the AI you talk to

This plugin
the adapter

Rhino's connector
made by McNeel

Rhino 8
does the modelling

FIG. 1 Think of a travel adapter. Claude and Rhino have different plugs; this plugin makes them fit. Rhino still does all the modelling, and everything happens on your own computer.

§ 03 Words you'll meet

A TINY GLOSSARY

Claude Code

The Claude app you chat with. It can use programs on your computer when you allow it.

Plugin

An add-on that teaches an app a new skill. This one teaches Claude to use Rhino.

MCP

The shared language AI apps use to talk to other programs. Like USB, but for software.

Terminal

A window where you type commands instead of clicking. You'll use it once, to install.

Node.js

A free helper program the plugin needs. Install it once, then forget about it.

Set it up once.

Four steps, about ten minutes. You only do this the first time. Copy the grey text exactly as it is.

1 Install Node.js

1. Go to **nodejs.org** and download the version marked **LTS**.
2. Open the file you downloaded.
3. Click **Next** on every screen, then **Finish**.

YOU'LL SEE

Nothing special happens afterwards. That's normal: it works in the background.

2 Add Rhino's connector

1. Open Rhino 8. In the command line at the top, type `_PackageManager` and press `Enter`.
2. Search for **Rhino-MCP-Platform** and click **Install**.
3. Close Rhino and open it again.

YOU'LL SEE

Rhino-MCP-Platform in the **Installed** list of the Package Manager.

3 Add the plugin to Claude

1. Open a terminal. **Windows:** Start menu, type **PowerShell**, open it. **Mac:** press `⌘ Space`, type **Terminal**.
2. Copy the first line below, paste it, press `Enter`. Then do the same with the second line.

```
claude plugin marketplace add filippovisentin/claude-rhino-plugin
claude plugin install rhino@claude-rhino
```

YOU'LL SEE

A line ending in **Successfully installed plugin**. You can close the terminal.

4 Say hello

1. Open Rhino first, and leave it open.
2. Start a **new** session in Claude Code.
3. Ask: *"What's in my Rhino document?"*

YOU'LL SEE

Claude lists your layers and objects. If Claude asks for permission, read the request and click **Allow**.

FROM NOW ON — Open Rhino, then open Claude, and just ask. **That's the whole routine.**

Ask it anything you'd click.

§ 04 Things to try

COPY ONE TO START

04.1 *“Model a 22 cm cylinder split into four blocks by function, each on its own layer.”*

→ builds separate, named parts

04.2 *“Add a twist-lock joint between the top and the body, and check the parts don't collide.”*

→ models the joint, then tests it

04.3 *“Show me the perspective view in ghosted mode.”*

→ takes a picture Claude can see

04.4 *“Make a Grasshopper definition with a slider for the radius.”*

→ places and wires the components

04.5 *“How big is everything on the Slats layer?”*

→ only reads, changes nothing

04.6 *“Save the file as purifier-v2.3dm in my Documents.”*

→ saves only when you ask

§ 05 If it doesn't work

MOST COMMON FIXES

WHAT HAPPENS	WHAT TO DO
Claude says it can't reach Rhino.	Make sure Rhino is open. Then start a new Claude session.
Claude says the router or connector is missing.	Step 2 didn't finish. Install Rhino-MCP-Platform again and reopen Rhino.
*The terminal says **claude** or **node** is not recognised.*	Close the terminal, open a new one and try again. If it persists, redo step 1.
You get a long block of letters instead of a picture.	You're in an old session. Start a new one.
Still stuck?	Ask Claude: *“Rhino isn't connecting, can you check?”* It runs a check and explains the fix.

§ 06 Play it safe

FOUR HABITS

Read before you allow

Claude asks before running anything in Rhino. Click Allow only if the request matches what you asked for.

Save a copy first

Before big changes, save your file under a new name. If you don't like the result, you can always go back to it.

Files from strangers

Text hidden inside a model is read by Claude. Be careful with models you didn't make.
