Talk to Rhino *from Claude.*

Connects Claude Code to Rhino 8 and Grasshopper. Describe what you want in plain words. Claude builds the geometry, checks it and shows you the viewport.

§ 01 What it does

THREE JOBS

01.1

Connects by itself

Finds McNeel's Rhino MCP router on your computer. No paths to copy, and Rhino updates don't break it.

01.2

Lets Claude see

Viewport captures reach Claude as real images, so it can look at the model, spot mistakes and fix them.

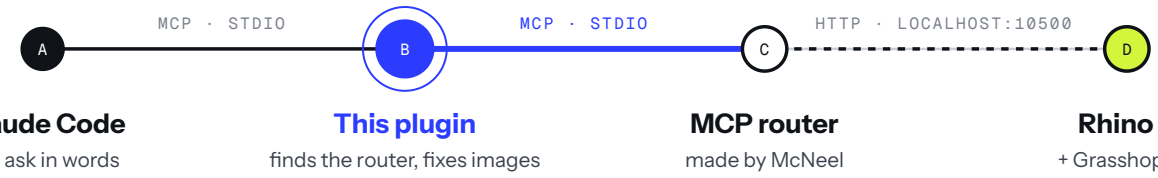

01.3

Explains problems

The `rhino-doctor` check says what's wrong and how to fix it, in plain words.

§ 02 How it works

ALL LOCAL

Claude Code
you ask in words

This plugin
finds the router, fixes images

MCP router
made by McNeel

Rhino 8
+ Grasshopper

FIG. 1 Everything runs on your computer. The plugin starts McNeel's router and passes messages through; the modelling tools come from Rhino.

§ 03 Get started

ABOUT FIVE MINUTES

1

Install the Rhino side

In Rhino 8 type `_PackageManager`, install **Rhino-MCP-Platform**, restart Rhino.

2

Add the plugin

Needs Node.js 18 or newer.

```
$ claude plugin marketplace add \
    filippovisentin/claude-rhino-plugin
$ claude plugin install rhino@claude-rhino
```

3

Say hello

With Rhino open, start a new Claude session and ask *"What's in my Rhino document?"*

Ask it anything you'd click.

§ 04 Things to ask Claude

PLAIN WORDS IN, GEOMETRY OUT

04.1 *"Model a 22 cm cylinder split into four blocks by function, each on its own layer."*
→ separate, named solids

04.2 *"Add a bayonet joint between the slats and the body, and check it for clashes."*
→ joint modelled, turn tested for overlaps

04.3 *"Show me the perspective view in ghosted mode."*
→ Claude sees the capture too

04.4 *"Make a Grasshopper definition with a slider for the radius."*
→ components placed and wired

04.5 *"List every object on the Slats layer with its volume."*
→ read only, nothing changes

04.6 *"Save the file as purifier-v2.3dm in my Documents."*
→ saves when you ask

§ 05 If something goes wrong

RUN THE DOCTOR

Ask Claude *"Rhino isn't connecting"*, or run the check yourself from the plugin folder.

```
$ node scripts/doctor.mjs
[OK  ] package  0.3.0 (Rhino 8.0)
[OK  ] mcp      router 0.3.0, 32 tools
[OK  ] rhino    localhost:10500
```

YOU SEE	WHAT TO DO
package FAIL	Install Rhino-MCP-Platform from `_PackageManager`, restart Rhino.
config WARN	Another Rhino MCP server is registered, often the community `rhinomcp`. Remove it with `claude mcp remove`.
rhino WARN	No Rhino running. Open Rhino 8, or let Claude start one.
images as text	The session predates your update. Start a new session.

§ 06 Good to know

SAFETY

It can run code
Python, C# and Rhino commands are part of the toolset. Keep permission prompts on unless you trust the task.

Unknown files
Text inside a model (object names, notes) reaches Claude. Treat models from strangers as untrusted input.

Secrets stay private
The doctor never prints other MCP servers' arguments or environment, where API keys may live.
